

DRIVING THROUGH WATER

BEFORE YOU GO

Check your wiper blades are in full working order and your tyre treads are the right depth

- Drive slowly and increase your stopping distances
- If you have driven through water, test your brakes on a clear patch of road and at a low speed
- If your brakes are not stopping correctly, dry them by pressing gently on the brakes while maintaining speed
- Pay attention to puddles and drive through them at low speeds
- DO NOT drive through standing /moving water - do not assume you know the depth
