

SAFE DRIVING - KEEP YOUR DISTANCE

The braking distance at 50mph is 38m - almost twice as long as a cricket pitch

DO YOU KEEP THE RIGHT DISTANCE?

- Leave enough space between you and the vehicle in front to ensure you can stop in time if the other vehicle brakes suddenly
- Time to brake can depend on the speed, tires, brakes, road surface and vehicle load- so always leave plenty of space
- Drive at a safe speed. if you do increase your speed, make sure to increase your following distance accordingly.
